

Scheduleurm certificate: four-regime actions to robust MaxWeight claims

a

Four workload regimes define the action fabric

Candidate actions are placements + co-location profiles + drain rules.

b

Measured-service action ledger

one lower-service table for candidate and diagnostic rows

row	lower service	penalty	oracle	status
declared q00-q11			0 / audit	admit
candidate cover			audit	admit
external policy row			bounded	diagnostic
unmeasured state			-	probe/defer

External rows audit the action family; unknown states receive zero theorem service until profiled.

c

Slack gate to theorem-facing claims

residual drift margin

claim boundary

Additive constants set the finite-set threshold; slope losses set eta.
