

Scheduleurm: audited configuration actions for robust MaxWeight scheduling

a

Configuration-action fabric

one action = placement + profile + admission + drain rule

b

Measured action ledger

same service cache for our policy and diagnostic policy families

row	lower service	penalty	oracle gap	status
q00-q11 bucket			0	admit
candidate cover			small	admit
external policy			bounded	diagnostic
unknown state			-	probe

External schedulers stress the candidate family; they are not used as universal full-stack claims.

c

Slack gate to theorem-facing claims

full-region slack delta

claim boundary

The figure shows the certificate interface, not an exhaustive engineering race.
